## PROFESSIONAL SUMMARY

Software Development Engineer Lead with 9+ years of experience spanning software engineering, test automation, and engineering delivery. Currently leading a team of 11 direct reports while remaining hands-on across full-stack development, quality engineering, technical strategy, and delivery execution. Built a career across backend APIs, modern web applications, observability, BI reporting, and automation frameworks using C#, .NET, React, TypeScript, JavaScript, Python, SQL, Playwright, Jest, and Selenium. Recognized for improving system reliability, accelerating release confidence, reducing defects, and mentoring engineers to deliver measurable business outcomes.

## CORE SKILLS

|                       |                                                                                                                                                                        |
|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Leadership & Delivery | Engineering leadership, people management, mentoring, technical strategy, cross-functional collaboration, delivery ownership, code review culture, quality engineering |
| Languages             | C#, Python, TypeScript, JavaScript, SQL, HTML, CSS                                                                                                                     |
| Frontend              | React, Next.js, Angular                                                                                                                                                |
| Backend & APIs        | .NET Core, .NET Web API, .NET MVC, Django, Flask, Blazor                                                                                                               |
| Test & Quality        | Playwright, Jest, Selenium, SpecFlow, test automation, regression strategy                                                                                             |
| Cloud & DevOps        | Azure DevOps, Azure Application Insights, Azure Functions, Azure Logic Apps, CI/CD, build and release pipelines, Azure Artifacts                                       |
| Data & Reporting      | SQL, MySQL, Kusto, Azure Storage, Power BI, DAX, M language                                                                                                            |
| Tools                 | Git, VSTS, Microsoft Team Foundation Server                                                                                                                            |

## PROFESSIONAL EXPERIENCE

### Software Development Engineer Lead | *Techno Brain LTD, Nairobi, Kenya*

March 2024 - Present

**Technologies:** TypeScript, JavaScript, Python, C#, React, .NET, Selenium, Jest, Playwright, SQL, Azure DevOps

- Lead and directly manage a team of 11 engineers, driving delivery planning, prioritization, coaching, and performance development across software development and quality engineering workstreams.
- Own technical delivery for engineering initiatives by aligning implementation plans, code quality expectations, test strategy, and release readiness with cross-functional stakeholders.
- Mentor engineers through code reviews, debugging support, design discussions, and day-to-day execution, helping raise technical quality, delivery discipline, and team capability.
- Maintained and optimized existing automated tests in TypeScript, reducing test execution time by 20%.
- Debugged and improved an existing codebase, leading to a 25% reduction in production bugs.
- Developed and expanded automated coverage with Jest and Playwright, writing 100+ automated tests and increasing the overall suite by 40%.

- Converted 60+ manual test cases into automated coverage, saving 15+ hours of manual testing effort per week.
- Introduced privacy-focused automated tests that reduced compliance issues by 30% and strengthened release confidence.
- Partner with product, engineering, and stakeholder teams to balance delivery speed, quality, and operational risk while shaping team execution standards and technical direction.

### **Software Development Engineer** | *Techno Brain LTD, Nairobi, Kenya*

**November 2019 - March 2024**

**Technologies:** React, Next.js, TypeScript, JavaScript, C#, .NET Core, SQL, Azure Application Insights, Power BI

- Designed and developed C# .NET Core applications and Web APIs to analyze, aggregate, and report operational metrics from multiple data repositories in support of SLA compliance.
- Built responsive React and Next.js applications that consumed internal APIs and improved usability, accessibility, and data visibility for engineering stakeholders.
- Improved application uptime by 20% by implementing telemetry, monitoring, and alerting through Azure Application Insights.
- Enhanced monitoring efficiency by 30% by developing BI reports for privacy team health metrics using M language, DAX, and SQL.
- Worked across backend, frontend, and reporting layers to deliver production-ready solutions with strong focus on maintainability, observability, and user experience.

### **Software Engineer** | *Granular IT, Nairobi, Kenya*

**September 2016 - November 2019**

**Technologies:** React, TypeScript, JavaScript, C#, .NET MVC, .NET Core

- Developed web and mobile event platforms for pharmaceutical companies including Merck and AstraZeneca, contributing to a 40% increase in attendee registrations.
- Built .NET MVC healthcare platforms for pharmaceutical clients, improving digital access to healthcare services and information.
- Built and maintained a video-conferencing education platform in React and .NET Core that connected medical innovators with leading educators.
- Collaborated closely with clients and internal teams to translate business needs into scalable digital products across healthcare and events domains.

### **Test Automation Engineer** | *Granular IT, Nairobi, Kenya*

**May 2016 - August 2016**

**Technologies:** SpecFlow, Selenium

- Automated testing of core web services using SpecFlow and Selenium, reducing testing time by 50% and decreasing regression issues by 30%.
- Improved software quality and release confidence by reducing regression effort and increasing confidence in generated code.

## **EDUCATION**

---

**Bachelor of Computer Science** | Karatina University

Second Class Upper Division | May 2016
